

Harmony in Motion: The Marionette House

The proposed project aims to establish a state-of-the-art Puppetry Arts Centre that celebrates the art form's dynamics and movement. The design incorporates an elevated new volume that creates a captivating contrast with the existing building. Additionally, it envisions the creation of two stepped plazas, one below the elevated volume and another facing the existing structure. These plazas will serve as public open-air theaters, and a main connection, enriching the cultural fabric of the city. Furthermore, the new volume will feature a cantilever over the existing building, providing a cultural terrace for special events. The design concept revolves around embracing the essence of puppetry while harmonizing with the contextual surroundings.

The plaza below the elevated volume forms a grand entrance, inviting visitors to immerse themselves in the world of puppetry. Its stepped formation creates a sense of anticipation and drama, mirroring the dynamic nature of puppet performances. The plaza facing the existing building offers an additional public space at the same level, enabling visitors to enjoy outdoor performances and gatherings. These stepped plazas not only enhance the visual appeal of the Puppetry Arts Centre but also contribute to the urban landscape.

The Project is composed of 2 Underground Floors and 5 Floors above the ground. The maximum Elevation is +19.0m

The built area above the ground level is 1580 m²

The built area below the ground level is 805 m²

Total built area of the Project is 2385 m² and an area of 780 m² for the landscape and stepped plazas.

Estimated Cost for the landscape is 456,300 € - Estimated Cost for the building is 3,945,045 €

Which makes the total Estimated Cost For the project 4,401,345 €

The cost is not including the interior furniture, and is subjected to increase or change based on the selected materials.
