The project aims to create a connection between the existing and new theater building, using the entrance as the main access point. This space, once a hidden and disorganized area, now evokes the charm of an urban back alley. Elements like lights and signs hint at the hidden treasures within. The glass ceiling with hanging wooden elements creates captivating shadows, while a bright red passage leads to the existing building's foyer, mirroring the entrance to the new theater.

As visitors enter the alley, they are greeted by a reveal of the building's heart: the courtyard. This open-air urban space, accessible through the new alley, is like a hidden garden that is only discovered by those who venture inside. Every area of the new building is seamlessly connected to this courtyard, creating a continuous flow that encompasses not only public spaces like the entrance, foyer, and cafeteria but also areas reserved for actors during shows and rehearsals.

Our vision is to create a private and enchanting space that unifies all the experiences, functions, and people that make up the theater "machine." The flexibility extends to the foyer, which can open up to the courtyard through movable panel partitions, transforming into a stage for open-air performances. The same flexible wall system is employed in the connection between the foyer and the main hall, allowing for seamless integration and the exploration of new forms of unconventional performances.

The main hall is designed as a modern black box theater, providing the flexibility for different stage layouts and seating arrangements. The central position of the wings offer new possibilities for actors, enhancing their performances. The offstage areas for actors are interconnected, allowing for the separation of distribution and public spaces while maintaining integration between them, enabling the continuous arrangement of different performances.

The estimated costs of the construction is 6 million of Bulgarian Lev
BUILDING DENSITY = 705 sqm
TOTAL BUILT-UP AREA = 1187 sqm
TOTAL LANDSCAPING AREA = 360 sqm
